

SC211

Talk-back station for deck and engine room

- Created for engine room spaces and harsh marine environment
- Connects horn speaker
- Connects headset for noisy environment communication
- Water tight and salt mist resistant
- -25 dg.C to +70 dg.C operating
- Build in relay for drive of auxillary horn and beacon
- EN60945 and IACS E10

Description

The SC211 talk-back station is created for use on board ships on deck and in engine spaces.

It has a robust completely water tight and salt mist resistant design. With the optional front covering door, it reaches an IP65 protection class and can be used directly in exposed areas.

The SC211 must be connected to either a 10W horn speaker or a headset. When using the headset, full duplex conversations can be obtained, but when using the horn speaker, the station either speaks or listens. In this case the speaker is used as microphone as well.

The station can be used in conjunction with a SC411 to make up a talk-back conference group, where the SC411 - typically on the bridge - can call one or more SC211's - typically on deck. The master is the SC411 which controls the speech direction. The call is initiated from the SC411. When the call is established, the speech direction is controlled from the SC411 by the PTT key.

The station has 3 push buttons, which can be preprogrammed for fixed call numbers. These keys are used as PTT keys as well, when the 10W horn speaker is used also for microphone.

The SC211 has a build in relay for activating an external horn and beacon.

The SC220 can be delivered in OEM variants allowing customers to add their own design to the front folio. Contact us for more information.

Specifications

- Connects 10W horn speaker
- Connects headset w. 10m cable
- 3 preprogrammed call keys
- Relay for driving horn and rotating light 50V 1A
- Power 18-32V DC 1A
- -25 to 70 dg.C operation
- DNV-GL type approved
- EN60945 and IACS E10 compliant
